Dear Professor Rodwell,

Run-on

I am greatly looking forward to taking Writing for Engineers with you this Spring semester. Last semester, CCNY's writing curriculum helped me grow and bring out a deeper interest in writing as a whole but the addition of the engineering aspect into the dynamic creates more interest as I feel more connected to my writing through my major. One long-term goal I have for this semester is that I would love to become more involved as a Mechanical Engineer. I would like to reach out to more professionals and have more of a stronger relationship with people of that level. This is a career goal that I would like to develop for the long-term by strengthening my professional relationships. Having just started college, I do not have that many professional relationship however, I hope that by taking this course I can become better at communicating and conversing with company officials and professionals alike. I aim to do this by increasing my efficiency in writing such that I am able to communicate with companies and officials more seamlessly and present myself as a better candidate for opportunities ahead. I hope to measure and succeed in my progress with this long-term goal by applying for multiple ^{SUMMER} internships over ~~now for over the summer.~~

repeated info

of ?

For the short-term, I am preferably looking to find an internship related to mechanical engineering. I have registered for a couple and have been working on my résumé to build up a better chance of me obtaining one over the summer. By partaking in an internship, I hope to get an experience of my field in person and elevate my qualifications for future opportunities. What I seek most aside from the experience in the internship would be a strong relationship with the professionals in the program in accordance with my long-term goal. I hope that my short-term goal will help me do my long-term goal, and set me up for my future. My dream is still vague at the moment because I am not sure what area of mechanical engineering I would like to specialize in but I think it would be a breathtaking experience to work with rockets or flight. This idea strikes out to me because of just sole wish. Having not experienced any engineering in the real world, I am eager to find a good internship experience.

I don't understand this phrase.

~~All of this is to say that~~ I am just searching for my dream. I can say that I want to do something however until I have actually tried it, I am only talking. I would like to take action and start moving towards what I really want to do after college. Therefore my overarching goal solidifies to me figuring out what path in mechanical engineering would be best for me and how I can get there. I see the other goals as the first steps towards this bigger mission and hope that I find and answer some time soon. The sooner I figure it out, the faster I can start working towards with the help of this class.

Sincerely,
Zahin Akif

Thanks for your thoughtful response significant
Pay attention to your repetitions. Unless some time/space
has passed, you don't need to refresh your reader.
